Box III TEXT OF THE ABSTRACT (Continuation of item 5 of the first sheet)

A electrophysiology catheter including control, localization, and/or fluid delivery features, and methods of using the same. One embodiment of the invention is directed to an electrophysiology catheter including a superelastic wire wich is shaped to bias the orientation of the catheter and a cable, and a method of controlling the catheter using the cable. Another embodiment is directed to an electrophysiology catheter including an adhesive to bias the orientation of the catheter. A further embodiment is directed to an electrophysiology catheter including an adhesive and one or more cables, and a method of controlling the catheter using the one or more cables. Another embodiment is directed to a method using acts of injecting a fluid into the heart of a patient and adjusting the diameter of an arcuate curve of the catheter. Further embodiments are directed to a catheter having multiple position sensors on an arcuate curve of the catheter mor a position sensor associated with a movable electrode of the catheter.

INTERNATIONAL SEARCH REPORT

International application No. PCT/US 03/34828

Box I	Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)
This Inte	emational Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:
1. X	Claims Nos.: 44–48,63–70 because they relate to subject matter not required to be searched by this Authority, namely:
	Rule 39.1(iv) PCT - Method for treatment of the human or animal body by surgery and therapy
2	Claims Nos.: because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
з. 🔲	Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box II	Observations where unity of invention is lacking (Continuation of Item 2 of first sheet)
This Inte	rnational Searching Authority found multiple inventions in this international application, as follows:
	see additional sheet
1.	As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2.	As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
з. 🗽	As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.: 1-15, 74-101
4.	No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:
Remark	on Protest The additional search fees were accompanied by the applicant's protest. X No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. Claims: 1-15

Electrophysiology catheter comprising a tip assembly being attached to a shaft, wherein the tip assembly includes a superelastic wire to bias the tip assembly in a first orientation

2. Claims: 16-43

Electrophysiology catheter comprising a tip assembly being attached to a shaft, wherein the tip assembly includes an adhesive cured in a configuration to bias the tip assembly in a first orientation

3. Claims: 49-57

Electrophysiology catheter comprising a biased tip assembly being attached to a shaft, and means for conducting a fluid

4. Claims: 58-62

Electrophysiology catheter comprising a biased tip assembly being attached to a shaft, wherein the tip assembly includes a plurality of position sensors

5. Claims: 71-73

Electrophysiology catheter comprising a biased tip assembly being attached to a shaft, wherein the tip assembly includes a movable electrode assembly

6. Claims: 74-101

Shaft /electrophysiology catheter comprising a channel formed of a superelastic material and shaped to bias a portion of the catheter in a first orientation
